

Ian Chiang responses
Candidate for Mayor of Calgary

Q1

I oppose privatization of municipal services and infrastructure.
However, I would reserve some for P3s as it may be the solution in certain circumstance.
I would study more and case by case.

I would support bringing previously privatized services inhouse if the result is not good.
I would keep those good one if proven to be good.
Again I need time to study about it.
I do not see one side of the coin.

Q2

I will.

Q3.

I will oppose.
I also need time to study it too.

Q4.

That is an issue that cannot be answered with a yes or no. I would build some kind of friendly relationship with mu counterparts at Provincial as well as Federal levels. If they are hostile to me, I would reciprocate. I would not be treated as a dog by them.
I would need to write a book of how I should propose to them. Because of the time and space allowed here, It is not available by now.

I favour spending cuts as well as tax reduction.

Q5.

Please refer to Alberta Health Service guidelines.
Everybody talks about freedom to wear masks or bra. It is all individual freedom. However, it is also the freedom of business owners to protect their employees and business by setting some requirements. It can be the same for me as a house owner, I would ask you to wear masks first before you come in for some repair. I want you to protect yourself and me to protect myself. Just like Starbucks, if you do not like it, you can make your own coffee.

Q6.

A lot of people can afford to spend \$5 on a burger, yet they expect free bus rides to go to anywhere they like. I do not know of any free bus service offer in any part of the world. Please let me know. This is a "Throw Away " society. A lot of things can be reused, repaired or recycle. In this way, affordability can be increased gradually, but overnight.
